

## Make Your CPOE Smarter

### SmartSearch<sup>SM</sup> Predictive Medication Ranking

Computerized physician order entry (CPOE) offers many advantages over traditional prescribing, but it still requires providers or pharmacy staff to build lists of favorites or search through long lists of medications to match the drug that's best for the patient. All of those keystrokes and clicks slow providers down, and add up to significant amounts of time when multiplied across all of the providers in your healthcare facility.

SmartSearch, an integral component of SmartSuite<sup>SM</sup> for pharmacies, works seamlessly within your e-prescribing workflow to deliver the most relevant results based on your recent prescribing behavior, the prescribing behavior of your colleagues, and patient medication history.

SmartSearch in conjunction with SmartSig<sup>SM</sup>, another essential component of SmartSuite, are powerful tools that can make your medication reconciliation process more efficient. Driven by DrFirst's patented artificial intelligence and machine learning technology, SmartSuite continually learns, getting smarter and smarter over time and reducing clicks and keystrokes.

Delivered to prescribers within your existing CPOE, SmartSearch requires little to no training to use.

### SmartSearch Improves E-prescribing Workflow by:

- Influencing search results by age, gender, and diagnosis code
- Personalizing search mechanisms to virtually eliminate the need for static medication favorites lists
- Organizing results without eliminating options
- Presenting relevant drug choices with minimal keystrokes

### Designed Specifically for Med Management Workflows:

- Shorter CPOE/e-prescribing implementation timeline
- Easy integration via one-time installation
- Continuous in-application updates via machine learning to enable prescribers to stay current with medication management workflows
